

Changing Temp Input

This guide will troubleshoot the temperature pins

Written By: BoXZY

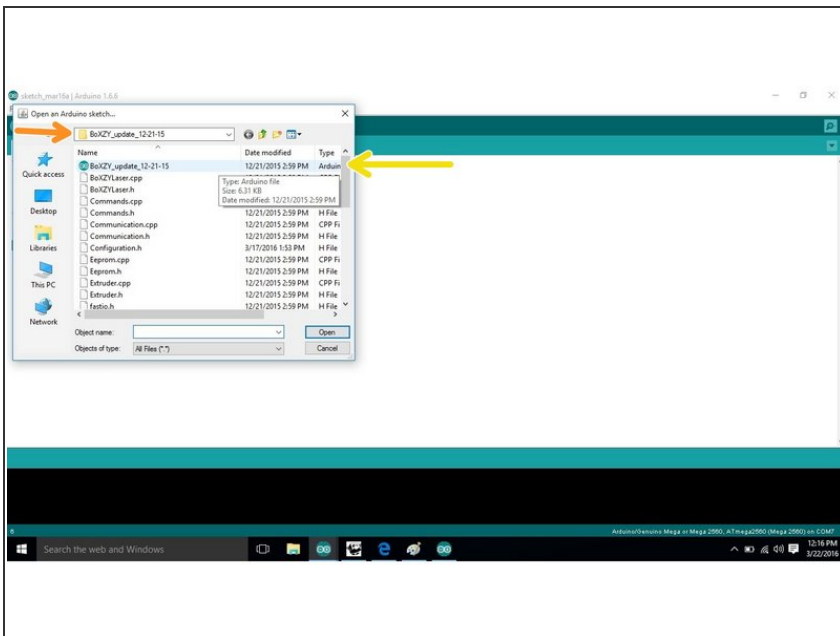

Step 1 — Getting the most recent firmware for BoXZY

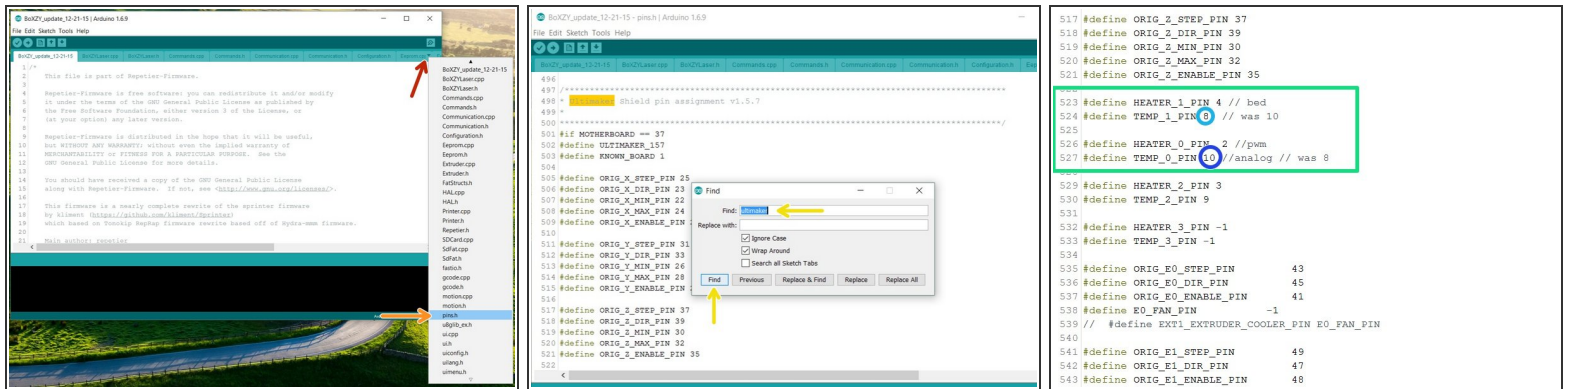

- **Download** the most recent firmware for BoXZY at [this link](#)
- **Save** and **UnZip** the contents of the file in a *New Folder* titled BoXZY Firmware

Step 2 — Opening the Firmware in Arduino

- Open your Arduino software
- **Select File**
- **Select Open** and locate the *BoXZY_update_12-21-15* folder
- Select the .INO file with the same name as the folder
- **Select Open**

Step 3 — Making the appropriate changes in the pin configuration file

- In the new window that opens select the drop down menu arrow, indicated by the *red arrow* in the image
- Select the file title **pins.h**
- Press **ctrl+f** (in windows) to access the **Find** function in the Arduino window
 - Type **ultimaker** and select **Find**
- Scroll down to view lines 523 through 527
- You will now switch **TEMP_1_PIN** and **TEMP_0_PIN** settings
 - **TEMP_1_PIN** you will *change to 8*
 - **TEMP_0_PIN** you will *change to 10*

Step 4 — Saving the Firmware

- **Save** the **pin.h** file by selecting **File** and then **Save** in the *Arduino IDE*

Step 5 — Switching the Physical Pins on the electronics

- **Carefully remove** the metal enclosure on the back of BoXZY to access the electronics
- **Remove** the white **connector** plugged into the slot indicated by the *red arrow* in the second image and red and white wires
- **Connect** the **connector** with red and white wires into the slot indicated by the *green arrow* in the image
- ⚠ **Make sure** the red wire is installed just as before inside the white connector when you re-install it in the new slot
- Install the connector with blue and green wires into the slot which previously had the connector with red and white wires installed.
- **Carefully replace** the metal enclosure

Step 6 — Flash the edited BoXZY firmware into the BoXZY arduino

- Go to [this link](#) and follow Steps 2 and Step 3
 - This will upload the edited firmware to the BoXZY electronics
- **Exit** the Arduino program and you are ready to use your BoXZY
